Share of Total
Workforce

573

High-tech
start ups

While Montana is often known for its strong agricultural and ranching industries, the state stacks up when it comes to tech. Seven percent of Montana's workforce is employed by the tech sector¹ and the state ranks in the top 20 for share of electric power produced by renewable energy technology.²

The Information Technology Council (ITI) is an international trade association and the premier global advocate for technology, representing the world's most innovative companies. For more than 100 years, ITI's members have been creating new technologies that have become a foundation for the U.S. economy and society, creating jobs and making the U.S. more innovative and competitive. The tech industry supports policies that complement these efforts by helping to increase opportunity, protect consumer privacy, make networks and devices safer, and protect our environment for future generations.
