Share of Total
Workforce

4,569

High-tech
start ups

With nearly \$20 billion in GDP from the information technology sector,¹ Ohio's technology industry provides an important boost to the state. The state's eight percent high tech share of the workforce helps make this true. Ohio isn't slowing down in innovation either. \$5.75 billion in public R&D funding is helping to ensure that the state continues to be competitive in the technology industry.²

The Information Technology Council (ITI) is an international trade association and the premier global advocate for technology, representing the world's most innovative companies. For more than 100 years, ITI's members have been creating new technologies that have become a foundation for the U.S. economy and society, creating jobs and making the U.S. more innovative and competitive. The tech industry supports policies that complement these efforts by helping to increase opportunity, protect consumer privacy, make networks and devices safer, and protect our environment for future generations.
