The Sooner State's economy is getting an important boost from their technology sector. In fact, the information tech sector makes up more than \$6.5 billion of the state's GDP.¹ This is possible in part by the roughly eight percent of Oklahoma's workforce made up of high tech occupations.² The impact of technology in Oklahoma can be seen through the importance of data and information services in the state, with more than 70 global companies relying on data centers in the state, including major technology companies such as Google, HP, and IBM.

The Information Technology Council (ITI) is an international trade association and the premier global advocate for technology, representing the world's most innovative companies. For more than 100 years, ITI's members have been creating new technologies that have become a foundation for the U.S. economy and society, creating jobs and making the U.S. more innovative and competitive. The tech industry supports policies that complement these efforts by helping to increase opportunity, protect consumer privacy, make networks and devices safer, and protect our environment for future generations.
